CODE:

```
def dfs(graph, start, visited=None):
    if visited is None:
        visited = set()
    visited.add(start)
    print(start, end=" ")

    for neighbor in graph[start]:
        if neighbor not in visited:
            dfs(graph, neighbor, visited)

# Example usage
graph = {
    'A': ['B','C'],
    'B': ['D','E'],
    'C': ['F'],
    'D': [],
    'E': ['F'],
    'F': []
}

print("DFS Traversal:")
dfs(graph, 'A')
```

OUTPUT:

```
========== RESTART: C:/Users/arunp/OneDrive/Documents/AI/EXP 8.py ==========
DFS Traversal:
A B D E F C
>
```
